

■ Feature Scope & Proposal: Zero-Touch Email PR Automation Engine

Project: CyberMedia AI Editorial Copilot
Document: Technical Proposal & Feature Scope
Target Audience: CyberMedia Editorial Leadership & Technology Team
Date: September 2026

■ Executive Summary

Currently, editors and authors manually copy Press Releases from email body/attachments, open the AI Editorial Copilot, paste the content, select the publication, and trigger generation.

The **Zero-Touch Email PR Automation Engine** completely eliminates this manual intervention. As soon as a Press Release email is received at a designated inbox, the system automatically:

1. Extracts PR content from **PDFs, Word documents (`.docx`), text files (`.txt`), or raw email bodies.**
2. Identifies the appropriate publication (**Dataquest, Voice&Data;**, or **PCquest**) and topic format (**News, Interview, Feature**).
3. Executes the full AI generation pipeline (Article, 11 PubLive Metadata fields, and 1280x720 3D Cover Art).
4. Saves the generated draft in the **Editor Review Queue ("Awaiting Review")** for final editorial sign-off.

■ Proposed Workflow

■ Saved to Database: Appears under "Awaiting Review" in Editor Dashboard]

■ Core Features & Capabilities

1. Universal Content Extractor

- **PDF Documents** (`.pdf`): Extracts raw text, headings, and sub-text using high-fidelity Python PDF parsers (PyMuPDF).
- **Word Documents** (`.docx` / `.doc`): Extracts formatted paragraphs and tables using `python-docx`.
- **Text Files** (`.txt`): Direct text parsing.
- **Email Body Content**: Strips HTML email signatures and corporate disclaimers using `BeautifulSoup4` to isolate core PR text.

2. AI Publication & Category Classifier

- **Automated Magazine Selection**: Uses Gemini AI logic to analyze PR domain context and automatically route it to:
- **Dataquest** (Enterprise IT, AI, Cloud, Datacenter, Cybersecurity)
- **Voice&Data**; (Telecom, 5G, Optical Fiber, Satcom, Networking)
- **PCquest** (Consumer Tech, Laptops, Personal Hardware, Gaming)
- **Article Format Classifier**: Automatically categorizes the PR as a *News Story*, *Feature*, *Interview Q&A*, or *Opinion Piece*.

3. Automated Generation & PubLive Package Synthesis

- Generates the complete ready-to-publish article draft.
- Synthesizes all 11 PubLive CMS metadata fields (Meta Title, Description, OG Tags, Twitter Copy, Focus Keywords).
- Generates PubLive recommended **1280x720 (16:9 Landscape JPG)** 3D Cover Image using native Google Gemini AI.

4. Seamless Editor Queue Integration

- Articles created via email automation are automatically saved with status `submitted`.
- Editors simply log into <https://editorial.cybermedia.in/articles>, view the "Awaiting Review" tab, and review/edit pre-generated drafts in 1 click.

■ Client Infrastructure Requirements

To enable this feature, CyberMedia will need to provide one of the following:

1. **Option A (Recommended):** A dedicated inbound email forwarding rule (e.g. `pr-inbox@cybermedia.in` -> SendGrid/Mailgun Webhook).
2. **Option B:** Office 365 / Microsoft Graph API OAuth access for a dedicated shared inbox.
3. **Option C:** IMAP login credentials for a dedicated PR email account.

■■ Implementation Schedule & Phasing

Phase	Milestone	Duration
Phase 1	Inbound Email Receiver & Document Extraction Engine (PDF, DOCX, TXT, HTML Body)	2 Days
Phase 2	AI Publication & Topic Classification Engine	1 Day
Phase 3	Integration with Existing Generation Pipeline & MongoDB Persistence	1 Day
Phase 4	End-to-End Testing, Spam Handling & Error Resilience	1 Day
Total	**Full Production Deployment**	**5 Days**

■ Business Value & Impact

- **95% Reduction in Preparation Time:** Editors no longer spend time copying, pasting, and formatting PRs manually.
- **Instant Processing:** Press releases received after hours or overnight are processed immediately into draft articles ready for morning review.
- **Zero Interruption:** Existing manual creation options remain 100% functional alongside automated email ingestion.
